**INSTALLATION STEPS**

1. Locate and mark the vehicle's centerline on the rear bumper (metal U-channel located in the license plate cavity). Clear the trunk to permit drilling for the hitch.
2. Position the hitch centered on the vehicle; square and level against the bumper channel and trunk floor. Using the hitch as a template, mark and drill holes in trunk floor for (4) 3/8" hardware and drill (2) holes in metal bumper beam for 7/16" hardware. Drill 1" access hole in bumper beam to fishwire hardware.
3. Fishwire 7/16" carriage bolts and CM-SP2 spacers through access hole and out drilled holes in bumper beam. Install 7/16" hex flange nuts as shown. Install 3/8" hardware as shown with fender washers located inside of trunk.
4. Torque all 3/8" fasteners to 45 lb-ft and 7/16" fasteners to 70 lb-ft.
5. Use silicone sealant to seal hardware installed through trunk floor.
6. Reinstall contents removed from trunk in Step 1. The license plate bracket may have to be reshaped slightly for license plate to clear hitch bolts.

**PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.**
