INSTALLATION STEPS

1. Remove the rear bumper by removing (4) to (6) screws located under rubber covers inside the trunk area or under the vehicle near bumper ends. Also, check for small screws located at the ends of bumper in fender and remove them.
2. Locate and mark vehicle's centerline on metal U-channel that retains fascia at bottom of bumper. An 8" section (4" each side of center) of U-channel must be cut away. Also cut away an 8" length of rubber fascia so hitch bumper bracket will install against the steel bumper. Replace remaining parts of the U-channel.
3. Place hitch into position as shown. Using hitch as a template, drill (2) holes in bumper for 7/16" fasteners.
4. Fishwire bolts and CM-SP2 spacers through drilled holes from inside of the bumper. An access hole may need to be drilled in some bumpers to fishwire hardware. Carefully position hitch over the bolts and secure the hitch with hex flange nuts.
5. Drill bumper using best hole in hitch front plate for (1) 1/2" bolt. Disregard extra holes in plate. Fasten hitch using handle nut. Handle nut should fit through adjacent hole and be flattened against bumper after final tightening. Use flat washers to shim between plate and bumper if necessary to level hitch.
6. Torque all 7/16" fasteners to 70 lb-ft, and all 1/2" fasteners to 110 lb-ft.
7. Reinstall bumper.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
