1. Lower exhaust by removing (2) isolators on the driver side muffler, (2) isolators on the passenger side muffler, and (2) isolators forward of the mufflers.

RUBBER ISOLATOR REMOVAL DIAGRAM

This technique can be used if an Exhaust Hanger Removal Pliers is not available.

Using a 5/8" open end wrench, slide the wrench up to the rubber isolator, cradling the hanger rod as shown. Next place the flat edge of a pry bar between the wrench and the hanger stop or hanger rod. Then simply rotate the pry bar toward the wrench to remove the rubber isolator.

Note: Using a spray lubricant or soapy water on the hanger rod and the rubber isolator helps removal.

2. Remove (2) screws securing rear fascia to underbody panel. Save screws for re-installation in Step (10).

INSTALLATION WALKTHROUGH:

3. Enlarge existing slot in the bottom of the driver and the passenger side bumper beams large enough to allow the threaded portion of a 7/16" carriage bolt to pass through.

4. Locate channel behind driver side bumper fascia leading to access hole in driver side bumper beam. Fishwire 7/16-14 x 1 1/4" carriage bolt and SP2 spacer through access hole and out enlarged hole in driver side bumper beam.

5. Locate square access cover on the outside of the bumper fascia on the passenger side of vehicle. Push in on side of cover with the arrow to open. Fishwire 7/16-14 x 1 1/4" carriage bolt and SP2 spacer through fascia access hole and out enlarged hole in passenger side bumper beam. Replace access cover when finished.

6. Place supplied nut plates over bumper beam. Raise hitch into position over exhaust and loosely secure hitch into place with 7/16" flange nuts. **Note:** Be sure to slide hitch as far forward as possible but not so it rests on the weld seam on the vehicle bumper beams.

INSTALLATION WALKTHROUGH:

7. Loosely secure hitch to nut plates with 1/2-13 x 5" hex bolts and 1/2" conical toothed washers.

8. Insert 7/16-14 x 1" carriage bolts through top of square holes behind receiver tube of hitch. Raise mounting strap between vehicle crossmember. Loosely secure mounting strap to hitch with 7/16" flange nuts.

9. Raise nut plate in front of vehicle crossmember. Loosely secure nut plate to mounting strap with 1/2-13 x 2 1/2" hex bolts and 1/2" conical toothed washers.

10. Torque all 1/2-13 x 5" hex bolts to 75 ft-lbs. Torque all remaining 1/2" hardware to 110 ft-lbs and all 7/16" hardware to 59 ft-lbs. Reinstall (2) screws removed in Step (2). Raise exhaust back into position. Hitch installation is complete.
