NOTICE

Before you begin installation, read all instructions thoroughly.

Proper tools will improve the quality of installation and reduce the time required.

To help prevent damage to the product or vehicle, refer to the specified torque specifications when securing hardware during the installation process.

Maintenance

To protect the product, wax after installing. Regular waxing is recommended to add a protective layer over the finish. Do not use any type of polish or wax that may contain abrasives that could damage the finish.

Mild automotive detergent may be used to clean the product. Do not use dish detergent, abrasive cleaners, abrasive pads, wire brushes or other similar products that may damage the finish.

Step 1

Remove the top cover of the jack to expose the jack gear. Wipe away any excess grease.

Use a hammer and punch to remove the original retaining pin and handle. Measure the original pin to determine the correct pin size to use.

Insert the new handle through the jack housing and gear. Align the gear pin hole and handle pin and insert either the 4 mm or 5 mm pin.

To install the 5 mm pin, use the provided 5mm drill bit to enlarge the handle pin hole.

Add grease to the jack gears and reinstall the cover.
