**CUSTOM WIRING CONNECTOR**

**WARNING**: DO NOT EXCEED PRODUCT RATING OR TOW VEHICLE LAMP LOAD RATING, WHICHEVER IS LOWER

**SUVS, MINI & FULL-SIZED VANS (S)**

Representative vehicle shown below

S3 - Behind driver side rear access panel

**NOTICE**

All steps must be followed to ensure the wiring connector will function properly. Once installed, test for proper function by using a test light or connecting a properly wired trailer.

**TOOLS NEEDED**

None

**WARNING**

Exceeding the product rating can cause loss of warranty, overheating and potential fire. Do not exceed product rating or tow vehicle lamp load rating, whichever is lower.

Check vehicle owner’s manual or contact the vehicle manufacturer for more information.
Step 1
Open the vehicle tailgate. On the driver side, remove the access panels, threshold, trunk floor panels and trays. Set aside all items removed taking care not to damage parts (A,B,C).

Step 2
Starting on the driver side, locate the vehicle 4-pin taillight wiring harness connector. The connectors will be similar to the one on the custom wiring connector. Insert the custom wiring connector into the vehicle connector. Make sure the connectors are fully inserted with locking tabs in place (D,E).

Step 3
When in use, route the 4-flat to the center of the vehicle and out of the trunk. When not in use, roll up and store in a convenient, out of the way location inside the trunk. Secure any loose wires with the provided cable ties.

Step 4
Reinstall all items removed during install. Install the provided 4-flat dust cover to help prevent corrosion.
