# **INSTALLATION INSTRUCTIONS**

🛦 WARNING: DO NOT EXCEED PRODUCT RATING OR TOW VEHICLE LAMP LOAD RATING, WHICHEVER IS LOWER

### **APPLICATIONS**

Make	Model
Nissan	NV 1500
Nissan	NV 2500
Nissan	NV 3500

## WIRING LOCATION GUIDE

#### SUVS, MINI & FULL-SIZED VANS (S)

Representative vehicle shown below

- S3 Behind driver side rear access panel
- S4 Behind passenger side rear access panel

### NOTICE 🕄 🗇

All steps must be followed to ensure the wiring harness will function properly. Once installed, test for proper function by using a test light or connecting a properly wired trailer.

### **TOOLS NEEDED**

None

### 🔥 WARNING 🔺 🔺

The battery connection must be fuse-protected, 10-amp max. Exceeding the product rating can cause loss of warranty, overheating and potential fire. Do not exceed product rating or tow vehicle lamp load rating, whichever is lower.

Signal Circuits - 3.0 amps per side Tail / Running Circuits - 6.0 amps total

Check vehicle owner's manual or contact the vehicle manufacturer for more information.

### **CUSTOM WIRING HARNESS**

### INSTALLATION / SAFETY INSTRUCTIONS

#### Step 1

Open the rea cargo doors.

#### Step 2

Starting on the driver side, inside the access pocket in the cargo area, locate the vehicle taillight wiring harness connectors (B). The connectors will be similar to those on the custom wiring harness. Separate the connectors from the taillight housing taking care not to damage the locking tabs.

#### Step 3

Insert the custom wiring harness end with yellow wire between the separated connectors. Make sure the connectors are fully inserted with locking tabs in place (C).

#### Step 4

Locate a suitable grounding point near the connector such as an existing screw with nut in the vehicle frame or drill a 3/32" pilot hole for the provided screw. The area should be free of rust, dirt and paint. Secure the white ground wire using the ring terminal and provided screw.

S A WARNING: Check for miscellaneous items that may be hidden behind or under any surface before drilling to avoid damage and / or personal injury.

#### Step 5

Remove the rear scuff panel (D). Route the custom wiring harness end with red and green wires to the passenger side behind the removed scuff panel. On the passenger side remove the jack for ease of installation. Repeat steps 2-3 on the passenger side using the harness end with red and green wires.

#### Step 6

Locate a flat spot inside the vehicle, near the taillight. Adhere the black converter box using the provided double-sided tape.

#### Step 7

Route the black power wire from the vehicle battery as shown on the included CME-PCL-INS sheet.

#### Step 8

When in use, route the 4-flat to the center of the vehicle and out of the trunk. When not in use, roll up and store in a convenient, out of the way location inside the trunk. Secure any loose wires with the provided cable ties.

#### Step 9

Reinstall all items removed during install. Install the provided 4-flat dust cover to help prevent corrosion.
