CUSTOM WIRING HARNESS

WIRING LOCATION GUIDE

PASSENGER CARS (P)
Representative vehicle shown below

P3 - Behind driver side taillight housing, inside of trunk
P4 - Behind passenger side taillight housing, inside of trunk

NOTICE
All steps must be followed to ensure the wiring harness will function properly. Once installed, test for proper function by using a test light or connecting a properly wired trailer.

TOOLS NEEDED

- 9/32" socket
- Ratchet
- Panel trim removal tool
- Phillips screwdriver
- Sealant

WARNING

The battery connection must be fuse-protected, 10-amp max. Exceeding the product rating can cause loss of warranty, overheating and potential fire. Do not exceed product rating or tow vehicle lamp load rating, whichever is lower.

Signal Circuits - 3.0 amps per side
Tail / Running Circuits - 6.0 amps total

Check vehicle owner’s manual or contact the vehicle manufacturer for more information.
Step 1
Open the vehicle tailgate. Remove all trunk floor coverings (A,B).

Step 2
Remove the fasteners securing the rear scuff panel. Remove the scuff panel by pulling out on the bottom and then up (C).

Step 3
Starting on the driver side, remove the two screws securing the cargo loops. Remove the interior side wall inspection cover to locate the vehicle taillight wiring harness connectors (D).

Step 4
On the outside of the vehicle, locate and remove the cover on the taillight assembly to gain access to the taillight fasteners. Remove the two screws securing the taillight and gently remove the taillight by gently pulling the light straight back (E).

Step 5
Behind the taillight, locate the vehicle taillight wiring harness connectors (F). The connectors will be similar to those on the custom wiring harness. Separate the connectors from the taillight housing taking care not to damage the locking tabs.

Step 6
Locate the grommet behind the taillight where the vehicle taillight wiring passes though from inside the cabin to the taillight. Remove the grommet and cut a slit large enough to route the custom wiring harnesses though (G,H).

Step 7
Route the custom wiring harness ends with the yellow and green wires out through the grommet opening and though the slit in the grommet. Insert the custom wiring harness end with yellow wire between the separated connectors. Make sure the connectors are fully inserted with locking tabs in place.
Step 8
Starting on the driver side, use the pry tool to remove the protective caps covering the fasteners below the taillight (I). Remove the three fasteners securing the rear fascia. Repeat on the passenger side of the vehicle.

Step 9
Route the custom wiring harness end with the green wire to the passenger side of the vehicle behind the loosened rear fascia (J,K,L). Repeat steps 3-5 on the passenger side using the harness end with the green wire.

Insert the custom wiring harness end with the green wire between the separated connectors. Make sure the connectors are fully inserted with locking tabs in place.

Step 10
In the interior of the vehicle, locate a suitable grounding point near the grommet such as an existing screw with nut in the vehicle frame or drill a 3/32” pilot hole for the provided screw. The area should be free of rust, dirt and paint. Secure the white ground wire using the ring terminal and provided screw.

⚠️ WARNING: Check for miscellaneous items that may be hidden behind or under any surface before drilling to avoid damage and/or personal injury.

Step 11
Adhere the black converter box using the provided double-sided tape. Failure to mount the box in a protected area can cause loss of warranty, product failure, overheating and potential fire (M).

Step 12
Route the black power wire from the vehicle battery as shown on the included CME-PCL-INS sheet.

Step 13
Reseat the grommet and use sealant (not provided) to seal the cut in the grommet and around all the wires.

Step 14
When in use, route the 4-flat to the center of the vehicle. When not in use, roll up and store in a convenient, out of the way location. Secure any loose wires with the provided cable ties.

Step 15
Reinstall all items removed during install. Install the provided 4-flat dust cover to help prevent corrosion.
